SKILLS

Programming Languages:

- C#, C++, C
- JavaScript
- Python
- HTML/CSS

Game/Software Development:

- Unity
- UE5
- Gameplay Programming
- Combat Systems
- AI Systems
- UI Systems
- Game Design
- Documentation
- OOP
- Database design

Development Practices:

- Agile/Scrum
- Debugging
- Project Planning
- Code Review
- Team Leadership

Tools & Technologies:

- Perforce (P4)
- Linux
- Visual Studio
- Version Control
- Azure VM
- Management
- Git

CERTIFICATIONS

Scrum Fundamentals

SOFTWARE PROJECTS

NEXULUM | UNR BEST OVERALL SENIOR PROJECT 2025

Award-winning Unity dungeon crawler featuring custom combat systems, player progression, and modular gameplay architecture.

ROCKET & VEHICLE PHYSICS SIMULATION PHYSICS PROGRAMMER | C++ | RAYLIB

Developed a custom 3D physics simulation featuring quaternion-based rocket orientation, realistic rotational movement, and 2D vehicle physics using C++ and Raylib.

PROFESSIONAL EXPERIENCE

Managing Member, Team 21 Studios LLC (Detailed in Work Overview)

2025-Present

Independent game studio focused on developing and publishing original game projects. Leading technical development, programming, infrastructure management, and production workflows.

Game Programmer, Mission to Enceladus

2025-2026

Gameplay development role focused on Unreal Engine 5 systems, backend integration, database development, and technical implementation for an iOS game project.

Retail Operations Associate, SilverState Relief

2025 - Present

Provided technical and operational support for retail systems, including POS troubleshooting, software assistance, employee training, sale floor TV troubleshooting, plus more.

WORK OVERVIEW

Managing Member, Team 21 Studios LLC 2025-Present

Co-founded Team 21 Studios LLC to continue development of Nexulum after being awarded UNR's Best Overall Senior Project 2025. Lead technical development, studio operations, and long-term project planning.

- Lead gameplay programming and technical development.
- Design, implement, and maintain gameplay systems using Unity and C#.
- Manage Perforce (P4) version control infrastructure hosted on Microsoft Azure Virtual Machines.
- Collaborate with team members on feature planning, implementation, testing, and technical problem solving.
- Coordinate development workflows using Agile and/or Scrum methodologies.
- Assist with business operations, project planning, budgeting, licensing, and financial management.
- Maintain studio website and public-facing project information.
- Participate in software architecture decisions, debugging, optimization, and code reviews.

Game Programmer, Mission to Enceladus 2025-2026

Worked with an independent development team on an Unreal Engine 5 iOS project, contributing gameplay systems and backend technologies under NDA.

- Collaborate with developers to integrate gameplay mechanics and technical systems.
- Participate in feature planning, implementation, debugging, and testing.
- Develop gameplay systems and functionality in UE5.
- Design and implement backend database structures supporting game systems.
- Develop API communication between backend services and Unreal Engine.

Retail Ops. Associate, SilverState Relief 2025 - Present

Provide technical and operational support in a regulated retail environment while maintaining compliance, customer service, and internal systems.

- Troubleshoot POS systems, computers, barcode scanners, receipt printers, and other retail hardware.
- Diagnose and resolve software and hardware issues to minimize operational downtime.
- Maintain accurate digital inventory records while ensuring CCB regulations.
- Train employees on POS, operational workflows, and inventory procedures.
- Manage confidential customer information with attention to privacy, security, and regulatory compliance.
- Assist with technical issues related to daily retail operations and internal software platforms.

PROJECT OVERVIEW

NEXULUM

Lead Programmer | Team 21 Studios LLC
2024 – Present

Top-Down 3D Roguelike Dungeon
Crawler RPG | Unity | C#

Nexulum is a top-down 3D roguelike dungeon crawler developed as the University of Nevada, Reno Senior Capstone project. The project was awarded Best Overall Senior Project 2025 and continues development through Team 21 Studios LLC.

Technical Contributions:

- Designed and implemented core gameplay systems including player combat, weapon mechanics, abilities, and progression systems.
- Developed modular gameplay architecture using C# and Unity design patterns to support scalable feature development.
- Created player classes, skill tree systems, and rune-based ability mechanics featuring elemental interactions.
- Implemented projectile systems, object pooling, AI navigation, animation integration, and gameplay optimization.
- Developed and maintained managers for core systems including Skill Trees, Projectiles, Visual Effects, Audio, Saving, and more.
- Collaborated with a team of developers using Perforce version control while participating in Agile development, code reviews, testing, and debugging.

Technologies:

Unity | C# | Perforce | Microsoft Azure | Git | Agile/Scrum Development

Team 21 Studios Website

Designed and maintained the public-facing website for Team 21 Studios to showcase projects, provide studio information, and support the continued development of Nexulum.

Technical Contributions:

- Developed and maintained responsive web pages for studio branding and project presentation.
- Managed website content, structure, and deployment workflows.
- Integrated project information, media, and external resources for public accessibility.
- Improved online presence through organized UI design and user-focused layouts.

Technologies:

HTML | CSS | JavaScript | GitHub Pages
